

I build technology teams, products,
roadmaps, and stacks in high-tech compa-
nies

Me in a nutshell

I specialize in leveraging cutting-edge technologies to drive innovation, with a particular focus on AI, large language models (LLMs), and agentic systems. My work is rooted in identifying emerging trends and rapidly translating them into practical solutions. I led the launch of Webidoo's first AI product in production, demonstrating early adoption of LLMs. I also created DesignPilot, a tool that automates user research by generating synthetic users, conducting interviews, and extracting insights based on the Jobs-to-be-Done (JTBD) framework. These initiatives reflect my ability to prototype and deploy AI-driven systems quickly, turning complex ideas into working products.

As a technology leader, I have consistently built and led high-performing engineering teams while driving strategic technical direction. At a martech company, I served as CTO, where I built the engineering team from the ground up and overhauled the product development process. By introducing agile methodologies and streamlining workflows, I significantly reduced development cycle times and deployment lead times. Additionally, I led the management of production infrastructure for a Fortune 50 client, ensuring high availability and operational excellence in a mission-critical environment. My leadership approach balances technical depth with team empowerment and process optimization.

Throughout my career, I have consistently delivered results by moving from vision to execution with precision. I have launched AI products into production environments, maintained enterprise-grade infrastructure, and driven measurable improvements in engineering efficiency. Currently, I am leading Meshify, a venture focused on deploying decentralized, agentic AI for business operations. Meshify empowers AI agents to autonomously manage tasks, optimize workflows, and identify growth opportunities using decentralized AI and blockchain. This reflects my commitment to delivering innovative, scalable solutions that meet real-world business needs while staying ahead of technological shifts.

Professional Experience

March 2025 **Founder**, Meshify
- ongoing

Meshify is an AI teammate for SMEs and professionals that makes sure no lead or opportunity slips through the cracks. Instead of relying on messy spreadsheets or clunky CRMs that demand constant data entry, Meshify connects directly to your inbox, chats, and documents. It automatically extracts leads, organizes them into a pipeline, and sends smart follow-up nudges at the right time. With a simple chat-based interface, Meshify feels like working with a colleague who never sleeps, remembers everything, and keeps you on top of your revenue opportunities — without the overhead of traditional tools.

Jan 2025 – **Venture Architect**, ScaleUp Labs
ongoing Genova, Italy; Cambridge (MA), USA

At ScaleUp Labs, I take on a contributor role, stepping in where ventures need deep technical expertise and fast-moving product guidance. My work here centers on product architecture & cloud foundations (designing lightweight yet scalable systems that can evolve as ventures grow), AI Integration (scouting emerging models and frameworks, then shaping practical ways to embed them into products to create differentiation) and fast prototyping & validation (helping teams move quickly from concept to MVP with minimal risk, setting up lean feedback loops to test hypotheses early).

Selected projects I've built and supported include:

- www.designpilot.cc – AI-powered design co-pilot.
- www.healthq.ai – clinical workflow automation for claim denial resolution.

Jul 2023 – **External Collaborator**, ScaleUp Labs
Jan 2025 Genova, Italy; Cambridge (MA), USA

ScaleUp Labs is a venture studio focused on rapidly validating, launching, and scaling high-impact startups. As an external collaborator, I provided architectural and technical guidance, helping early-stage ventures define scalable and efficient technology strategies. I played a key role in discovering and testing new AI technologies, assessing their feasibility, and integrating them into product roadmaps.

Jan 2024 – **Chief Technology Officer (CTO)**, Webidoo
Aug 2024 Genova, Italy; Milano, Italy; Cambridge (MA), USA

As CTO I continue to spearhead strategic planning and product development activities, fostering the creation of cutting-edge technology for both established and emerging markets. Collaborating closely with the Chief Product Officer (CPO), I provide a clear vision and roadmap for our engineering organization, aligning our efforts with business goals to ensure the development of flexible, scalable, reliable, and maintainable products.

As part of my responsibilities, I define, implement, and manage the overall software development process, encompassing software architecture, design, implementation, quality assurance, performance testing, and the timely release of high-quality software products. Building on my prior experience as Director of Product Development and Engineering, I remain dedicated to driving innovation and excellence in tandem with the CPO.

Feb 2023 – **Director of Product Development and Engineering**, Webidoo
Jan 2024 Genova, Italy; Milano, Italy; Cambridge (MA), USA

I am responsible for strategic planning for product development activities to create technology for existing and expanded markets/offerings. I provide a clear vision and roadmap for the engineering organization that meets business goals and ensures the development of flexible, scalable, reliable, and maintainable products.

I am creating, leading, and expanding a multi-location/remote team that spans product engineering, data science, and quality assurance, including Webidoo employees, new hires, and strategic vendors. I am creating processes, infrastructure, and a culture that enables a geographically dispersed team to collaborate effectively and creates sustained practical technological engineering across multiple competing product initiatives.

I define, implement, and manage the overall software development process including SW architecture, design, implementation, QA, performance testing, and release of software products.

Jan 2024 – ongoing **Top Mentor – Data & AI**, Cosmico
Remote

Within this initiative, I join a collective of seasoned professionals and experts, all driven by the desire to give back to the vibrant community of talents. My responsibilities span various facets, including contributing as a speaker in webinars, aiding in the selection of new mentors, and collaborating on the design of webinar plans. Moreover, I can engage directly with aspiring talents through one-on-one mentoring sessions and participate in the enriching Cosmico Minds gatherings.

At the heart of my role lies a commitment to leveraging my experience and insights to empower the next generation of professionals. Through active participation in mentoring activities and strategic collaborations, I aim to foster an environment where knowledge sharing, and growth thrive.

Jan 2023 – ongoing **Advisor**, eSteps Health
Remote

As a technical advisor, I am responsible for providing strategic guidance on technology architecture and stack. I help eSteps to select and implement the right technologies that align with the company's goals. I am also responsible for helping the founder, Nidhal, build the technical team. I provide strategic guidance on team structure and help the company identify the right candidates for the job. I am involved in the interviewing process, evaluating candidates for their technical skills, communication skills, and culture fit.

Feb 2023 – Aug 2024 **Advisor**, Pregmune
Remote

I provide specialized technical guidance to Pregmune, leveraging my experience as CTO to offer insights into technology architecture, software development methodologies, and industry trends.

Jul 2021 – Jan 2023 **Chief Technology Officer (CTO)**, Pregmune
Genova, Italy; New York (NY), USA

As CTO, my responsibilities are building and leading all product and technology efforts in Pregmune, a health data company specialized in creating and monetizing Digital Twins of patients with fertility issues. Overall, my goal is to create a strong foundation for our company's technology, enabling us to deliver innovative products and services to our customers.

Apr 2021 – **Advisor**, Accelerate Italy
Apr 2022 Genova, Italy; Cambridge (MA), USA

Accelerate Italy (AI) is a groundbreaking program that helps Italian startups expand their businesses into the United States. AI is a partnership between leading Italian innovation hubs, top-tier US venture capital firms, and successful Italian American entrepreneurs. I am responsible for setting up and managing our online platform and providing technical guidance and support to our startups as they navigate the complex world of entrepreneurship.

Sep 2022 – **Main contributor**, Apraizr
Feb 2023 Genova, Italy; New York (NY), USA

I worked on a Web3 project called Apraizr that uses novel machine learning algorithms to offer live price valuations for popular NFT projects. I built the platform (i.e., products, infrastructure, website) and created a business model that we could present to potential investors and partners.

Apr 2021 – **Senior Consultant**, Spinnaker Venture Partners, LLC
Jun 2021 Genova, Italy; Boston (MA), USA

I collaborated with Mark Roth of Spinnaker VP focusing on IT consulting and sysadmin activities to help Spinnaker VP in creating new initiatives.

Mar 2021 – **DevOps Lead**, Advanced Global Solution Spa
Jun 2021 Genova, Italy

I worked as a sysadmin in the IT department of one of the biggest European banks, where I was responsible for configuring datacenter virtual resources and preparing them for use by various business teams and departments within the organization.

Nov 2017 – **Head of IT**, RuleX
Mar 2021 Genova, Italy; Newton (MA), USA

I was hired by the CEO and COO with the objective to create and manage the IT department in RuleX, a rapidly growing startup that was offering a novel AI software that enables business experts to embed automated real time predictive intelligence using machine learning algorithms in applications. I created and managed the IT team, and I was responsible for the architecture and software integration strategy of the enterprises as well as IT operations. I led the automation transition in any aspect of the company, and I acted as technological advisor for aspects related to software architecture and infrastructure.

Jan 2016 – **Research Fellow**, Nokia Bell Labs

Oct 2017 Dublin, Ireland

As Research Fellow at Nokia Bell Labs in the Application Platforms & Software Systems Research Lab, I worked on the most hot and interesting research challenges in the industry. I got research experience on Serverless Architectures, Container-Based Cloud Infrastructures, with the focus to make such platforms highly elastic, efficient, and self-adaptive. I worked also on online modelling and understanding of carrier-grade VM-Based Cloud Services.

In this and in the former 10 years of research experience, I have contributed to the development of 1 patent and published 30 peer-reviewed papers (as listed on Google Scholar). I have also been actively involved in various funded projects, including 2 EU-funded projects, 2 ESA-funded projects, and 2 MIUR-funded projects.

Jan 2014 – **Post-Doc Research Fellow**, University of Genoa
Jan 2016 Genova, Italy

I worked in the Satellite Communications and Networking Laboratory (SCNL) at the University of Genova focusing on Software Defined Networks (QoS aspects and multicontroller) and Nanosatellite/DTN networks for rural access. I wrote 7 journal papers and 10 conference papers. I was advisor of 6 thesis and 3 PhD.

Jan 2013 – **Post-Doc Research Fellow**, NYU Polytechnic School of Engineering
Jan 2014 New York, USA

As a Researcher at the Prof. Chao Lab, I worked on Software Defined Networking. I got and extensive study of literature on SDN and quality of service applied at datacenter networks. I also worked on Virtual Machine migration in datacenters.

Mar 2013 – **Visiting Research Fellow**, New York University Abu Dhabi
Dec 2013 Abu Dhabi, UAE

As a Researcher at the Prof. Chao Lab. I worked on Software Defined Networking. I got and extensive study of literature on SDN and Quality of Service applied at datacenter networks. I also worked on Virtual Machine migration in datacenters.

Jan 2012 – **Post-Doc Research Fellow**, University of Genoa
Jan 2013 Genova, Italy

Jan 2009 – **PhD Student**, University of Genoa
Dec 2012 Genova, Italy

Education

- Apr 2012 **PhD in Computer Science**, University of Genoa
Genova, Italy
- Jan 2010 **Professional Engineering Qualification**, University of Genoa
Genova, Italy
- May 2008 **MSc in Telecommunications Engineering**, University of Genoa
Genova, Italy
- Dec 2005 **BSc in Telecommunications Engineering**, University of Genoa
Genova, Italy

Core Competences

◆ Technical Guidance and Mentoring ◆ Servant Leadership

I have a background in effectively communicating recommended architectural and products visions, to various stakeholders including senior management, and partners. I have a track record of building trust and advocacy for our services to our customers.

I am skilled in promoting awareness among dev/ops teams on improving development processes through the introduction of modern code design techniques, modern innovative software deployment methods and new approaches in infrastructure building. I participate in in-depth architectural discussions to ensure that our solutions are designed for successful deployment and operation in the cloud.

I have successfully managed and supported a pool of 20 talented professionals throughout my entire career with a servant leadership approach. I served as an advisor and supervisor for over 30 PhD, master, and bachelor's degree theses.

◆ Research Mindset ◆ Lean Approach ◆ High-Tech Startup Culture

I have a strong background in research, with a focus on elastic serverless architectures, container-based cloud infrastructures, admission control, queuing theory, and software-defined networking. This expertise was developed through my Ph.D. studies at NYU and NYU Abu Dhabi, as well as my work as a researcher at Nokia Bell Labs.

Such experience helped me in my industry experience: I work as leader of technological innovator teams. I early adopt and incubate IT and cloud-native projects like K8s and serverless. Having 10 years of research experience, I use the same research/lean-oriented mindset in the companies I work for: build, measure, and learn.

I am very comfortable working in early-stage ventures or environments that are characterized by strong dynamism. I thrive in situations where I can use my skills and knowledge to help a company grow and succeed. I am adaptable and able to handle the challenges that come with working in an early-stage venture, and I enjoy the fast-paced, constantly evolving nature of this type of work. I am confident in my ability to contribute value to a team and help drive the success of a company from the ground up.

◆ Design, Implementation and Operations of Products and Infrastructures

I have strong experience in architecture and software integration strategy of the enterprises as well as early-stage ventures. I have experience in IT operations in production environments (having worked as suppliers of a Fortune 50 customer and maintaining our platform up and running 24/7). I am a technological advisor in for aspects more related to software and architecture (DB choice, microservices architecture) like what a software architect does.

◆ Hands-on Experience on AI, Cloud, DevOps, and IT

I have strong hands-on experience in designing, building and operating LLMs tools, AI platforms, cloud technologies and cloud infrastructure (Azure, AWS), container-based infrastructures (Kubernetes, Docker), infrastructure-as-a-code tools (Terraform), telemetry, CI/CD, and DevOps culture. I am a seasoned IT administrator: strong experience in managing and operating Microsoft 365 and Google Workspace. I have proficient programming skills in C++, Python, and scripting (Powershell, Bash). In-depth knowledge in Linux sysadmin tools and Linux-based emulation of IP networks, QoS and traffic engineering.
